

AUTOPEPE WHITEPAPER

Version 1.0 · October 2026

AutoPepe is an AI trading agent for Robinhood Chain, with a frog on its screen. You tell it your trading rules in plain English. It watches the chart around the clock and trades for you, from a wallet of its own, inside limits you set. By default it asks before every trade. Pepe turned that off. You don't have to.

Status. AutoPepe is in development. Nothing described in this paper is live yet unless it is marked **Live**. Features, names and details may change before launch. This paper will be updated as things ship.

1. SUMMARY

- **What it is:** an app and a Telegram bot for building your own AI trading agent on Robinhood Chain.
- **What it automates:** watching the chart, checking your rules, and placing the trade when a rule hits. That's around the clock, weekends included.
- **What you control:** the AI model it runs on, the money it can touch, the tokens it may trade, how much it can spend, and whether it asks you first.
- **What keeps it in line:** the agent trades from its own smart-contract wallet. The AI can only propose trades and never signs them. Every trade is checked twice, once by our policy engine and once by the wallet's on-chain rules. Assets can only move back to the agent's wallet or to you. No leverage, ever.
- **Tokenomics:** 1,000,000,000 supply, 0% tax. 90% to the liquidity pool, 5% development (locked, linear release), 5% community and listings.
- **What \$AUTOPEPE does:** it pays for the AI. You pick OpenAI, Anthropic or Google Gemini, with no API keys and no sign-ups, and pay for what you use in \$AUTOPEPE. Spent \$AUTOPEPE goes to the AutoPepe treasury. It is never burned.

2. WHY NOW

Trading agents are moving into the mainstream. On September 29, 2026, Robinhood announced Robinhood Agents, AI agents that can research markets and place trades from a dedicated account inside its app.¹ Robinhood said that since it opened agentic trading in May, more than 150,000 customers had opened agentic trading accounts, and that agents use its tools almost 30 million times a day.¹ Its agents ask for approval before each trade by default, and customers can switch that off, although Robinhood notes that crypto trade approvals must stay on in Connecticut, New York and California.¹

AutoPepe takes the same idea on-chain, to Robinhood Chain, and adds three things a brokerage app doesn't:

1. **The market doesn't close.** On-chain markets trade on weekends and overnight, so your rules can too.
2. **The receipts are public.** Every trade an agent makes is an on-chain transaction anyone can check.
3. **It trades the chain's own tokens.** That includes the memecoins that live on Robinhood Chain.

It's also designed to remove two things that put a lot of people off AI trading bots: you don't need to set up API keys or write code, and you never hand your main wallet to a bot.

¹ Robinhood Newsroom, "Robinhood Puts the Power of Hedge Funds in Every Trader's Pocket," September 29, 2026. AutoPepe is not affiliated with Robinhood.

3. HOW IT WORKS

1 • **You say.** "If \$TOKEN drops 20% today, buy \$50. Max \$200 a week."

2 • **It watches.** It checks the chart around the clock. Nights and weekends too. You go to sleep.

3 • **It trades.** At 3am, \$TOKEN is down 20%. It buys \$50 from its wallet. With Ask first on, it pings you and waits for your tap. With YOLO on, it

just does it, inside your limits.

Other rules you could set: buy the dip, take profit, stop loss, weekly buys, rebalance.

Examples only. Not trading advice.

4. THE PRODUCT

AutoPepe comes as a **web app** and a **Telegram bot**. The web app does everything. The bot is for the things you want on your phone at 3am: approvals, alerts, pausing, chatting with your agent and setting up rules. Anything that needs your wallet's signature, like depositing, withdrawing or changing limits, happens in the web app.

4.1 PICK A BRAIN

Choose the AI model your agent runs on: **OpenAI, Anthropic or Google Gemini**. You don't need an API key or an account with any of them. AutoPepe runs the models for you and bills you for what you use, in \$AUTOPEPE (see section 6). You can switch models at any time. Your wallet, limits and rules stay the same.

4.2 A WALLET OF ITS OWN (THE PAD)

Every agent gets its own **Pad**: a smart-contract wallet that you own. You deposit into it what you're willing to let the agent trade, and you can withdraw at any time. **Only you can withdraw**, and only to your own wallet. Your main wallet is never connected to the agent.

4.3 THE LEASH

You set the agent's limits, and they're written into the Pad's on-chain rules:

- **Max per trade** and **max per day**.
- **Token whitelist**: the agent can only trade tokens you've picked, and only from a list of tokens that pass our safety checks (section 5).

- **Max slippage.**
- **Key expiry:** the agent's trading permission expires after a period you choose, and you can revoke it whenever you like.
- **No leverage.** No borrowing, no perps, no options. Spot trades only, always.

4.4 LILY PADS (STANDING RULES)

A Lily Pad is a rule written in plain English: "if this, then that." Your agent's AI turns it into exact conditions and **reads it back to you before saving**. Nothing runs until you confirm.

Once saved, Lily Pads are checked around the clock by AutoPepe's rule engine. The engine runs your rule exactly as written. It doesn't ask the AI to re-decide every time, so the result is predictable and doesn't depend on the AI being in a good mood.

Conditions you'll be able to use include:

- price moves over a time window;
- price crossing a level;
- a position's gain or loss from your entry;
- a schedule, like every Monday at 9am;
- changes in trading volume;
- a token's share of your Pad.

Actions include:

- buy a fixed amount;
- sell part of a position;
- rebalance to a target weight.

Every rule has a cool-down and spending limits of its own, on top of your leash.

4.5 ASK FIRST, OR YOLO

Ask first is the default. Every trade waits for your tap, in the app or in Telegram, and expires if you don't answer. Nothing happens in that case.

YOLO mode skips the asking. You turn it on after confirming your limits. Your caps and whitelist still apply in YOLO mode. You can switch back to Ask first at any time, from the app or the bot.

4.6 TALK TO YOUR PEPE

Chat with your agent. Ask it what it's watching, why it sold half at 3am, or how the week went. Give it a one-off trade in plain English, and you'll still confirm it before it goes through. It can only see its own Pad, never your main wallet.

4.7 RECEIPTS AND THE LEADERBOARD

Every trade an agent makes is on-chain, so every agent keeps receipts. The app shows your agent's trades and its profit and loss over different periods. The calculation leaves out your deposits and withdrawals, so those don't count as gains or losses.

Agents that opt in can appear on a public **leaderboard**, with sensible minimums to make it harder to game with tiny or brand-new wallets. Past results don't predict future results.

4.8 COPY MODE (PLANNED)

See an agent on the leaderboard you like? Copy mode will let you copy its Lily Pads into your own agent, as drafts you review, under your own limits. Copy mode is **subject to legal review** and may change or not ship in some regions.

4.9 WHAT IT TRADES

At launch, the agent trades tokens on Robinhood Chain that pass AutoPepe's safety checks, including memecoins. Tokenized stocks may be added where users are eligible. This is **subject to legal review**, and they won't be offered to anyone in the United States.

5. SAFETY MODEL

An agent that trades real money needs hard limits. AutoPepe is designed around these principles:

1. **The AI proposes. It never signs.** The AI can only suggest a trade. It has no access to keys and can't change your limits, your approval mode or your withdrawals.
2. **Every trade is checked twice.** First by AutoPepe's policy engine, then by the Pad's own on-chain rules. Even if our servers were compromised, the on-chain rules still cap what can happen: whitelisted tokens only, within your limits, and back to your Pad.
3. **Assets only go back to you.** The agent's trading permission can't send assets anywhere except the Pad itself. Only you, the owner, can withdraw, and only to your wallet.
4. **No leverage, ever.** Only spot swap routes are allowed.
5. **Untrusted text is data, not orders.** Token names, websites and social posts can try to sneak in instructions. The agent treats that text as information only.
6. **Token safety checks.** Before a token can be traded, it has to pass checks such as minimum liquidity and a simulated buy and sell, to help filter out tokens you can buy but can't sell. Tokens are rechecked regularly and paused if they fail.
7. **Stop means stop.** Pause one agent or all of them in one tap, and revoke the agent's on-chain permission whenever you want. Trades that already went through stay as they are.

Audit: the smart contracts have not been audited yet. If an audit is done, the report will be published here. Until then, AutoPepe won't call itself audited.

6. \$AUTOPEPE

6.1 BASICS

Chain	Robinhood Chain
Total supply	1,000,000,000
Tax	0%
Contract	One token contract. Address: TBA
Liquidity pool	90% of supply, locked at launch (lock details TBA)
Development	5% of supply, locked with a linear release (schedule TBA)
Community & listings	5% of supply, held in a public multisig (address TBA)

6.2 WHAT IT'S FOR

\$AUTOPEPE pays for the AI. Every time your agent uses its model, whether you're chatting, setting up a Lily Pad or getting a trade explained, it uses some model capacity. That usage is priced from the model provider's rate, plus any service fee, and paid in \$AUTOPEPE at a market rate at the time of use. You top up an in-app balance with \$AUTOPEPE. Exact pricing and balance terms will be published before the app opens.

6.3 WHERE SPENT \$AUTOPEPE GOES

Spent \$AUTOPEPE goes to the **AutoPepe treasury**. **It is never burned.** The treasury address and how the treasury is used will be published at launch.

6.4 ALLOCATION

ALLOCATION	SHARE	TOKENS	TERMS
Liquidity pool	90%	900,000,000	Locked at launch. Lock details TBA.
Development	5%	50,000,000	Locked, released linearly. Release schedule TBA.

ALLOCATION	SHARE	TOKENS	TERMS
Community & listings	5%	50,000,000	Airdrops, community campaigns and liquidity for possible future exchange listings. Held in a public multisig. Address TBA.
Total	100%	1,000,000,000	

Lock periods, the release schedule and all wallet addresses will be published before launch.

6.5 WHAT \$AUTOPEPE IS NOT

\$AUTOPEPE is a memecoin with one job. It is **not** a share in AutoPepe, the team or the treasury. It pays **no** fees, dividends or staking rewards. There is **no** burn and **no** buyback promise. Holding it gives you no claim on anything. Its price can go to zero.

7. ROADMAP

Phases ship when they're ready and safe. No dates are promised.

PHASE	WHAT SHIPS	STATUS
0 · Hatch	Token launch, website, this whitepaper, the Pond community	IN PROGRESS
1 · Ask first	Web app and Telegram bot beta: pick a brain, Pad, leash, chat, one-off trades, approvals, \$AUTOPEPE billing	IN DEVELOPMENT
2 · Lily Pads	Standing rules and the round-the-clock rule engine	IN DEVELOPMENT
3 · YOLO and	YOLO mode, P&L, share cards, opt-in leaderboard	IN DEVELOPMENT

PHASE	WHAT SHIPS	STATUS
receipts		
4 • The wider pond	Copy mode; tokenized stocks where eligible	PLANNED, SUBJECT TO LEGAL REVIEW

Every feature on `autopepe.fun` carries a status tag. If a feature changes or is dropped, we'll update the site and this paper.

8. COMMUNITY

- Website: autopepe.fun
- Telegram, the Pond: t.me/ThePondPepe
- X: [@AutoPepeRH](https://twitter.com/AutoPepeRH)

The only contract address is the one published on `autopepe.fun` and in our pinned posts. **We never DM first.** Nobody from AutoPepe will ever ask for your seed phrase or private key.

9. RISKS

Please read this before you buy \$AUTOPEPE or fund a Pad.

- **AI agents make mistakes.** An agent can misread an instruction, act on wrong or stale data, or make a trade you wouldn't. You're responsible for every trade your agent makes.
- **Automation doesn't wait for you.** With YOLO on or Lily Pads running, your agent can trade while you're asleep or away, including during sharp price moves. Pausing stops new trades but doesn't reverse trades already made.
- **Your limits are your protection.** Set them low to start. A limit set too high protects you from nothing.
- **Smart contracts can fail.** Software can have bugs, and bugs on a blockchain can mean funds that can't be recovered.

- **Third-party models.** Your instructions and information about your Pad are processed by third-party AI providers under their own policies.
 - **Tokens are volatile.** Tokens on Robinhood Chain, especially memecoins, can lose most or all of their value quickly. Thin liquidity can cause slippage or failed trades.
 - **\$AUTOPEPE is a memecoin.** It has no promised value and can go to zero. Only buy what you can afford to lose.
 - **Development risk.** AutoPepe is in development. Features may be delayed, changed or not ship at all.
 - **Regulation.** Rules for AI trading tools, copy trading and tokenized assets vary by country and can change. Some features may not be offered in some regions, including the United States.
-

10. LEGAL

AutoPepe is an independent project built on Robinhood Chain. It is not affiliated with, endorsed by, or sponsored by Robinhood Markets, Inc. or its affiliates, OpenAI, Anthropic, Google, or Matt Furie, the creator of Pepe the Frog. The AutoPepe character is fan-made.

This whitepaper is for information only. It is not investment, financial, legal or tax advice, and it is not an offer or solicitation to buy or sell any token, security or other financial product in any jurisdiction. Nothing in it is a promise of future features, performance or value. Do your own research and follow the laws where you live. Don't use a VPN or other tools to get around regional restrictions.

This paper may be updated. The latest version is always at autopepe.fun/whitepaper.

11. GLOSSARY

TERM	MEANING
Agent	Your AI trading agent. It has a name, a brain, a Pad, a leash and rules.
Brain	The AI model the agent runs on: OpenAI, Anthropic or Google Gemini.
Pad	The agent's own smart-contract wallet. You own it. Only you can withdraw.
Leash	Your limits: per-trade and daily caps, token whitelist, slippage, key expiry.
Lily Pad	A standing rule, "if this, then that," checked around the clock.
Ask first	Default mode. Every trade waits for your approval.
YOLO	Mode where the agent trades without asking, inside your leash.
Receipts	On-chain records of every trade an agent makes.
The Pond	The AutoPepe community.
